Figure 1: *Performance of constructing a BVH and then casting a number of diffuse rays with NVIDIA GTX Titan in SODA (2.2M triangles). SBVH [Stich et al. 2009] yields excellent ray tracing performance, but suffers from long construction times. HLBVH [Garanzha et al. 2011a] is very fast to construct, but reaches only about 50% of the performance of SBVH. Our method is able to reach 97% while still being fast enough to use in interactive applications. In this particular scene, it offers the best quality–speed tradeoff for workloads ranging from 30M to 500G rays per frame.*
